For Your Future

Technologies Shaping the Future of Manufacturing Come Together at JIMTOF

JIMTOF2026, showcasing cutting-edge technologies from Japan and abroad, is entering its final days. The event continues to attract large numbers of manufacturing professionals, engineers, and students, with lively discussions, information exchanges, and business negotiations taking place at exhibition booths and seminar venues.

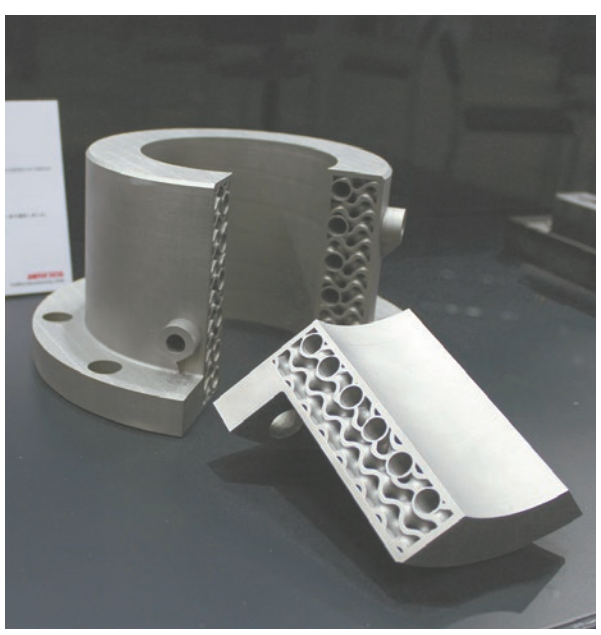

The exhibition highlights machine tools for high-precision, high-efficiency machining, automation systems, industrial robots, production management solutions powered by AI (artificial intelligence) and IoT (Internet of Things), and environmentally friendly technologies that improve energy efficiency. Exhibitors are presenting innovative solutions to shared manufacturing challenges, including labor shortages, skills transfer, and decarbonization, offering a tangible vision of next-generation factories.

The exhibition also features new production methods using additive manufacturing (AM) and digital technologies, along with advanced measurement and quality assurance technologies that expand the possibilities of manufacturing. Lectures, seminars, and workshops held throughout the event are also attracting considerable interest, sparking lively discussions among industry professionals. In addition, numerous programs have been prepared for young people who will shape the future of the machine tool industry.

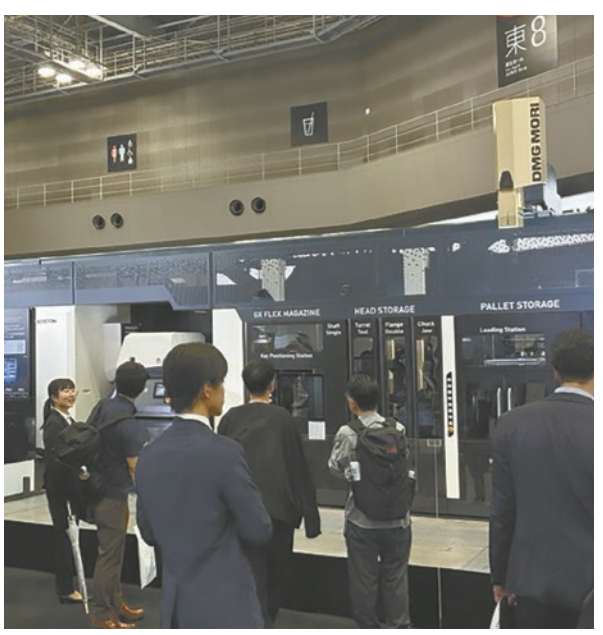

Held under the theme “When Technology Takes Off, the Possibilities Are Limitless,” JIMTOF2026 offers a glimpse into the future of manufacturing through exhibitors' efforts to drive technological innovation and create new value. With technologies and solutions that will shape the next generation of manufacturing coming together in one place, the exhibition offers a unique opportunity to experience the latest advances firsthand.

Live demonstrations of the latest machine tools and ultra-precision machining equipment from various manufacturers, along with presentations of cutting-edge technologies, are featured at the exhibition venue

State-of-the-art components with complex geometries and advanced functionality, manufactured using additive manufacturing (AM) technology, are showcased

An automated, unmanned system capable of automatically changing and transporting workpieces, chuck jaws, and cutting tools to support high-mix, low-volume production

Physical AI-powered robot demonstrates automatic recognition of glossy and transparent cylindrical workpieces that conventional systems could not previously recognize

Discover the Future of Manufacturing at JIMTOF2026!

Programs for Students

At JIMTOF, one of Japan's largest international machine tool exhibitions, you can get an up-close look at massive machines, cutting-edge robots, and factories of the future that you rarely get to see. Discoveries that make you wonder, "How is that made?" or "I never knew jobs like this existed!" could inspire your future dreams and career. Come and experience the future of manufacturing that is attracting worldwide attention!

EXPERIENCE

Galleria, East Halls 1F

Machine Tools Driving the Evolution of Robotics

Humanoid robots are attracting attention as a key technology for the future of manufacturing. Featuring Kawasaki Heavy Industries' humanoid robot Kaleido, this exhibit highlights the machine tool technologies that make such robots possible and support their widespread adoption. Come and explore the technologies shaping the factories of tomorrow and their potential.

＊Cooperation: Kawasaki Heavy Industries, Ltd.

South Hall 4

Manufacturing Experience Corner

Visitors can try making a bag hanger using a jig milling machine and other tools. This hands-on activity offers a chance to experience the joy of manufacturing while working with actual machines.

＊Cooperation:
Employment Division, Bureau of Industrial and Labor Affairs, Tokyo Metropolitan Government;
Tokyo Metropolitan Vocational Skills Development Centers

South Hall 4

Collaboration Scraping by a Robot and Skilled Craftmen (Hand Scraping Workshop)

Hand scraping is a traditional skill that achieves precision within just a few micrometers. This exhibit explores next-generation manufacturing through collaboration between skilled craftspeople and robots. Visitors can also try hand scraping in a hands-on workshop and discover the precision machining techniques behind machine tools, along with the excitement and depth of manufacturing.

＊Cooperation: FANUC CORPORATION and member manufacturers of the Japan Machine Tool Builders' Association (JMTBA)

South Hall 4

Manufacturing Studies at Technical High Schools

This exhibit showcases manufacturing education at technical high schools. Through the results of hands-on training and research projects, visitors can see how the next generation of engineers is being trained.

＊Cooperation: National Association of Principals of Technical Senior High Schools; Tokyo Metropolitan Technical High Schools

South Hall 4

IMEC Poster Session

A poster session will be held where universities and research institutes from Japan and abroad present their machine tool research findings.

CONNECT

Reception Hall, 1st Floor, Conference Tower

Networking Event for Students and Exhibitors

Saturday, October 31, 4:00 PM–6:00 PM

Over 40 companies will gather in a dedicated networking and matching area connecting students with potential employers. Students can talk freely with HR and general affairs staff and engineers from JIMTOF exhibitors, including major machine tool manufacturers, about their work, technologies, working practices, and more.

International Conference Room, 7th Floor, Conference Tower

Top Seminar by Machine Tool Manufacturers

After JIMTOF2026

Sunday, November 1, 9:00 AM–12:40 PM

Executives and young engineers from machine tool manufacturers will explain the importance and appeal of machine tools at the forefront of manufacturing, as well as the rewards of working in the machine tool industry, in an easy-to-understand way.

Inquiries About the Networking Event and Seminar

JMTBA Student Booth Tours Now Underway

The Japan Machine Tool Builders' Association (JMTBA) is running the JMTBA Student Booth Tours for students interested in the machine tool industry. These guided tours visit member companies' booths selected according to a theme. Participating students receive an e-GIFT that can be redeemed for points.

● Registration
To take part, scan the QR code below and fill in the required information.

JMTBA Student Booth Tours Schedule

Friday, October 30

Course	Tour Time	Companies to Visit
Large Machine Tools, Gear Cutting Machines, and Measuring Instruments	11:00 AM ～ 12:15 PM	Kashifuji Works, Shibaura Machine, Nidec Machine Tool, Tokyo Seimitsu
Machining Centers ③	1:00 PM ～ 2:15 PM	Ohtori Kiko, Roku-Roku Smart Technology, Nidec Machine Tool, Nachi-Fujikoshi
Grinding Machines ②	3:00 PM ～ 4:15 PM	Nidec Machine Tool, Nachi-Fujikoshi, Toyo Advanced Technologies, Mitsui Seiki Kogyo

Saturday, October 31

Course	Tour Time	Companies to Visit
Recruitment for Non-Engineering Roles ②	11:00 AM ～ 12:15 PM	Yamazaki Mazak, O-M, Nidec Machine Tool, Nachi-Fujikoshi
Lathes ②	1:00 PM ～ 1:55 PM	Yamazaki Mazak, O-M, Nakamura-Tome Precision Industry
AM and Electrical Discharge Machines	2:45 PM ～ 3:40 PM	Makino Milling Machine, Nidec Machine Tool, DMG MORI

Check it out here

Passing the Manufacturing Torch to the Next Generation

Facing a labor shortage, the machine tool industry urgently needs to attract young talent and pass on technical expertise. We asked industry professionals to share messages for the next generation, including what to look for at JIMTOF and highlights of their company booths. We also interviewed students visiting the exhibition to hear their impressions of JIMTOF2026 and how they envision the industry's future.

To the Next Generation: Messages from Industry Professionals

At Okuma, we develop both machines and control systems in-house, supporting manufacturing worldwide through technologies that integrate mechanical engineering, electrical engineering, information technology, and knowledge creation.
At JIMTOF, we invite you to explore not only our machine tools but also the technologies behind high-precision machining and automation, as well as the passion of our engineers. We hope you will discover the depth of manufacturing and the appeal of working at Okuma, where opportunities range from product development to customer solutions, and envision yourself shaping the future of manufacturing with us.

Okuma Corporation – Human Resources Department

Advances in AI and digital technologies are transforming the manufacturing industry. Celebrating our 50th anniversary, Sodick continues to take on new challenges under the theme “Grow Forward in the Next Era.” With a focus on electrical discharge machines (EDMs), we have remained committed to developing our core technologies in-house, integrating expertise in mechanical engineering, electrical engineering, control systems, and software.
We hope JIMTOF gives you an opportunity to discover Sodick’s unique technologies and passion for manufacturing. We look forward to meeting the next generation of manufacturing professionals.

Sodick Co., Ltd. – Manager, Human Resources Section, Human Resources Department, Corporate Division

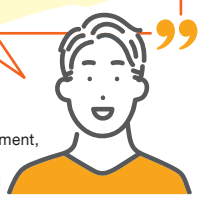

At JIMTOF, you can explore cutting-edge machine tools and automation technologies and discover the future of manufacturing. We are now entering the era of “Physical AI,” where AI can think, make decisions, and act in the physical world.
However, AI alone cannot make things move. THK was the first in the world to commercialize the LM Guide as a linear motion guide system. Since then, our technologies, including ball screws and electric actuators, have supported the movement of robots and automated equipment. AI thinks. THK technology makes it move. Visit the THK booth to experience our technologies firsthand.

THK Co., Ltd. – Manager, AE Section 1, AE Department, Sales Engineering Division, LM System Planning and Development Division, Industrial Machinery Headquarters

JIMTOF Through the Eyes of Young People: Interviews with Student Visitors

We came here on a school field trip. This is my second visit to JIMTOF, having also attended in 2024. I was really impressed by how many companies take pride in their technology and how passionate they are about what they do. This time, I’m particularly looking forward to visiting FANUC’s booth and checking out the robots and latest machine tools on display. At school, we get hands-on experience using 3D printers, industrial robots, and lathes. I hope what I learn at JIMTOF will help me make decisions about my future studies and career.

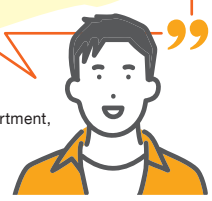

Third-Year Student
in the Robotics Course,
Mechanical Engineering Department,
Tokyo Metropolitan
Kuramae Technical High School

We came here as part of a school activity. I’m excited to see the technology of major companies like TSUGAMI firsthand, since we don’t often get an opportunity like this. I’d also like to check out companies based in my home prefecture of Gunma, as well as those with sales offices there. When I visited the Telus Laser booth, they explained things in detail, and I thought it looked really interesting. In the future, I’d like to find a job where I can use the CAD skills I’m learning at school. I’m hoping this visit to JIMTOF will also help me with my job search.

First-Year Student,
CAD Technology Department,
Gunma Prefectural
Maebashi Industrial Technology
Training School

I feel really lucky to have visited JIMTOF in my first year, since it’s only held once every two years. I think this visit will also help me decide what to specialize in and what kind of job I want in the future. It’s not often you get to see so many actual machines all in one place, and I was really impressed by how cool they looked, right down to the individual parts. Another great thing is getting to see such a wide variety of machines and the latest technology firsthand. We use conventional lathes in our classes at school, so I was amazed by how smoothly and quickly the latest NC lathes operate.

First-Year Student,
Mechanical Technology Department,
Ibaraki Prefectural
Tsuchiura Industrial
Technology Training School

I’m starting with the booths of companies I’m interested in, like Mitsubishi Electric, AMADA, and DMG MORI. Many of the companies exhibiting here employ graduates from my university. Seeing their machines up close and listening to the explanations has given me a much clearer idea of the kinds of jobs I could do at each company. I also thought machining involved a lot more manual work, but seeing a six-axis robot in action, operating entirely automatically without human intervention, really changed my perspective. I’m amazed by how far manufacturing technology has come.

Second-Year Student,
Department of Information
Science and
Mechatronics Engineering,
Institute of Technologists

Learn About Cutting-Edge Manufacturing at JIMTOF

Here are some events where students interested in manufacturing can see the machine tool industry’s latest work up close.

Women in STEM shaping the Future

Women in STEM share the appeal and possibilities of Manufacturing

Women engineers and technical professionals from the aerospace industry share their honest stories of setbacks, challenges, and the moments that make their work truly rewarding. Discover the real side of manufacturing beyond corporate presentations, and let’s find inspiration for your own career and future.

Driving the Future: The Thrill of the Machinery Business

The machinery industry plays a vital role in supporting the future of society while operating on a global scale. Based on extensive experience interviewing companies in Japan and abroad as an industrial journalist, the speaker highlights the potential of machinery and manufacturing technologies, introduces companies taking on challenges in the global market, and shares the excitement of a profession that drives the future.

Dining at JIMTOF

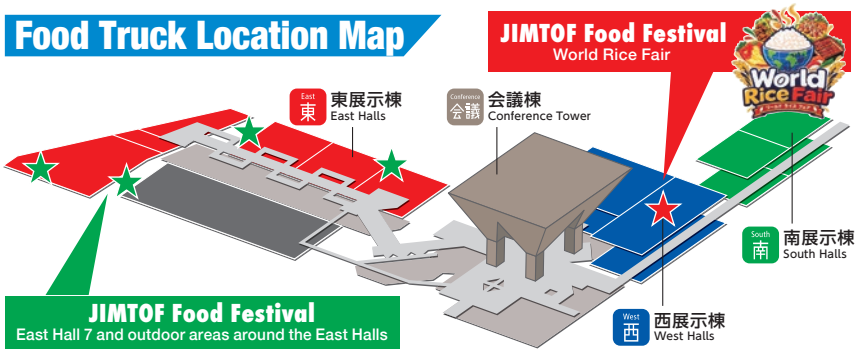

With so many visitors filling the halls, food is one of the great pleasures of JIMTOF.

The JIMTOF Food Festival brings food trucks with a wide variety of menus to East Hall 7, outside the East Halls, and the West Rooftop Exhibition Area.

The West Rooftop Exhibition Area also hosts the World Rice Fair, where visitors can enjoy a range of rice dishes from around the world.

Boxed lunches are also sold on the second floor of the East Halls, on the third floor of the South Halls, and in the Conference Tower restaurant area. Together, these dining spots serve the meal needs of visitors and exhibitors alike.

How High-Performance Teams Are Built
—Team Building and Management from Manager of the Japan National Baseball Team

Mr. Tadahito Iguchi, who was appointed manager of the Japan National Baseball Team in July 2026, will take the stage at JIMTOF. Drawing on his career as a player in Japanese baseball and the Major Leagues, as well as his experience as a manager, he will discuss the importance of team building and leadership.

Manager of the Japan National Baseball Team
Mr. Tadahito Iguchi

October 30 (Fri.) 3:00 PM～4:00 PM

10 Reasons Why Your Message Isn't Getting Across

"We'll look at how to fix typical STEM flaws—like being bad at teaching, misunderstood in research, or awkward at parties. Also, please note I'll be doing a STEM flip-chart comedy routine in the second half."

Yobinori
YouTuber
Takumi Yobinori

South Hall 4 INSIGHTS Stage — South Hall 4, South Halls 4F J

October 30 (Fri.) 1:00 PM～2:00 PM

Women in STEM shaping the Future
Women in STEM share the appeal and possibilities of Manufacturing

Women engineers and technical professionals from the aerospace industry share their honest stories of setbacks, challenges, and the moments that make their work truly rewarding. Discover the real side of manufacturing beyond corporate presentations, and let's find inspiration for your own career and future.

October 31 (Sat.) 11:00 AM～12:00 PM

Digital utilization through 3DA models in the automotive industry
— Balancing Accelerated Development and Manufacturing with Japanese-Standard Quality

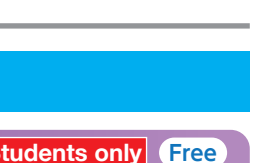

The ideal approach to collaboration and utilization of 3DA models in Japanese manufacturing sites
1. Report on discussions and potential within the Japan Automobile Manufacturers Association (JAMA)
2. Report on the current status and future direction of process planning in the machining field by the Japan Promotion Council for Manufacturing Standard Data
3. Core technologies linking 3D CAD, process planning, and CAM

South Hall 4 INSIGHTS Stage — South Hall 4, South Halls 4F J

October 31 (Sat.) 1:00 PM～2:00 PM

Driving the Future
— The Thrill of the Machinery Business

The machinery industry plays a vital role in supporting the future of society while operating on a global scale. Based on extensive experience interviewing companies in Japan and abroad as an industrial journalist, the speaker highlights the potential of machinery and manufacturing technologies, introduces companies taking on challenges in the global market, and shares the excitement of a profession that drives the future.

Industry Japan
Industrial Journalist and Representative of Industry Japan
Naomi Nasu

Student Support Program

Manufacturing Experience Corner/ Manufacturing Studies at Technical High Schools — South Hall 4, South Halls 4F

October 26 (Mon.) ～ 31 (Sat.)

Manufacturing Experience Corner
(Tokyo Metropolitan Vocational Skills Development Center)

Experience the fun of manufacturing by creating a bag hanger that includes machining on a jig mill. Visitors can gain hands-on experience and enjoy the excitement of making things while operating actual machine tools. * In cooperation with the Tokyo Metropolitan Bureau of Industrial and Labor Affairs Employment Division, the Tokyo Metropolitan Vocational Skills Development Center

Manufacturing Studies at Technical High Schools

Learn about manufacturing education initiatives at technical high schools. Through displays of practical training projects and research activities, visitors can gain insight into how the next generation of engineers and skilled technicians is being developed. * In cooperation with the National Association of Principals of Technical Senior High Schools, Tokyo Metropolitan Technical High Schools.

Networking Event for Students and Exhibitors / Top Seminar by Machine Tool Manufacturers

Students only　Free

Networking Event for Students and Exhibitors

October 31 (Sat.) 4:00 PM～6:00 PM　Reception Hall, Conference Tower 1F

A dedicated networking and matching area designed to connect students with industry professionals. Visitors can freely exchange ideas with HR and administrative personnel, as well as engineers from JIMTOF exhibitors, including leading machine tool manufacturers, and learn about their work, technologies, and work styles.

Top Seminar by Machine Tool Manufacturers

November 1 (Sun.) 9:00 AM～12:40 PM　International Conference Room, Conference Tower 7F

Executives and young engineers from machine tool manufacturers will provide an easy-tounderstand introduction to the importance and appeal of machine tools, which play a vital role at the forefront of manufacturing, as well as the rewards and opportunities of working in the machine tool industry.

After JIMTOF exhibition period

Contact for the Networking Reception and Top Seminar

JIMTOF INSIGHTS

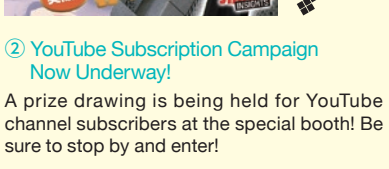

Special Features Linked to the Exhibition

At the JIMTOF INSIGHT special booth, visitors can see props used in the videos currently available online and discover behind-the-scenes stories from filming.

① Minecraft-Style Pickaxe Display & Live Recording

A real-life Minecraft-style pickaxe, fabricated using a metal 3D printer, will be on display at the Special Booth.
Don't miss a live recording of a behind-the-scenes talk show featuring the engineers who brought this unique project to life, taking place on the INSIGHTS Stage in South Hall 4.

Pickaxe Creation: Behind-the-Scenes Talk Show
Friday, October 30, 10:45 AM~

② YouTube Subscription Campaign Now Underway!

A prize drawing is being held for YouTube channel subscribers at the special booth! Be sure to stop by and enter!

【How to Participate】
① Subscribe to the JIMTOF INSIGHTS YouTube channel!

Subscribe here!

② Show your subscription screen at the JIMTOF INSIGHTS special booth.
③ Enter the prize drawing for a chance to win exciting prizes!

A Report on Must-See Events at JIMTOF 2026

JIMTOF 2026 features a wide variety of events unique to the show, including hands-on programs where visitors can operate machine tools and experience actual machining, as well as a range of special exhibits. In this article, our reporter takes part in some of these events and shares their highlights and appeal.

Machine Tools Driving the Evolution of Robotics

Galleria, East Halls 1F

The organizer's special exhibit, "The Future of Robots at Work Across Industries," in the East Halls Galleria focuses on Japanese AI robotics and machine tool technologies. With support from Kawasaki Heavy Industries and machine tool manufacturers, the exhibit features robots, machine components, and informative displays.

The first thing that catches the eye is Kawasaki Heavy Industries' humanoid robot, Kaleido. Three versions of the approximately 180-cm-tall robot are on display, representing its second, seventh, and eighth generations. Behind them are essential components for robot manufacturing, including robotic speed reducers. Wall panels trace Kaleido's development and showcase machines that have won the Machine Industry Design Award presented by The Nikkan Kogyo Shimbun, illustrating the connection between the history of machine tools and advances in robotics.

During the exhibition, talk sessions themed "Machine Tools Supporting Japanese Robotics" will feature Junichi Murakami of Kawasaki Heavy Industries, a developer of Kaleido, alongside representatives from machine tool manufacturers. On October 30, he will be joined by Kunitoshi Kawano of Kashifuji Works and Yosuke Sawada of Yamazaki Mazak at 11:00 AM, followed by Daisuke Tanaka of NIDEC MACHINE TOOL at 2:00 PM.

The exhibit offers insights into the latest developments in Japanese-made robots, future technical challenges, and how machining technologies can help overcome obstacles to mass production and cost reduction.

Manufacturing Experience Corner

South Hall 4, South Halls 4F

JIMTOF offers a wide range of programs for students. At the "Hands-on Manufacturing Experience" corner in South Hall 4, visitors can try working with actual machines. I took on the challenge of making a bag hanger using a jig milling machine.

A jig milling machine processes workpieces fixed to a table by moving a rotating cutting tool. It is ideal for machining operations requiring high positioning and dimensional accuracy.

It was my first time operating a jig milling machine. To drill a pilot hole in the disc-shaped weight that rests on the desk, I lowered a lever to bring the cutting tool toward the workpiece. The hole was then threaded to accommodate a set screw that secures the hook in place.

Skilled craftsmen can assess machining conditions by the feel of the lever as they lower it. "Even the burrs left after machining reflect each craftsman's individual technique," a staff member explained.

Visitors can also try bending the hook and tapping threads. Participants can take their finished workpieces home. Sessions are held daily at 10:00 AM, 11:30 AM, 2:00 PM, and 3:30 PM, with a maximum of 20 participants per session.

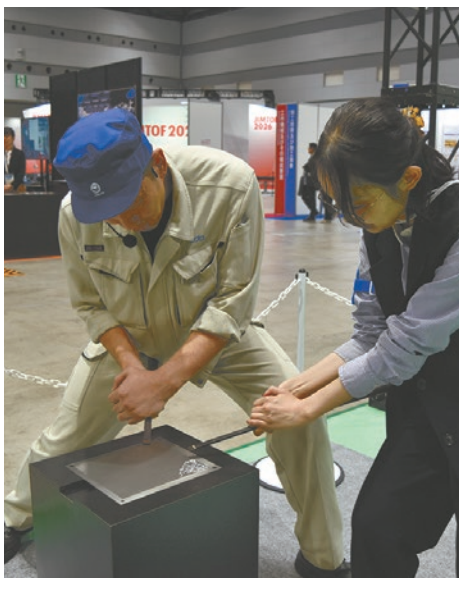

Next to the hands-on experience corner, a presentation area has also been set up for technical high schools to showcase their achievements, in cooperation with the National Association of Principals of Technical Senior High Schools and Tokyo Metropolitan Technical High Schools.

Collaboration Scraping by a Robot and Skilled Craftmen (Hand Scraping Workshop)

South Hall 4, South Halls 4F

The organizer's special exhibition "Manufacturing NEXT STAGE: Collaboration Between Hand-Scraping Robots and Skilled Craftsmen" in South Hall 4 focuses on hand scraping, a technique practiced by skilled craftsmen. Used to finish sliding surfaces and beds of machine tools, this manual process achieves precision within just a few micrometers.

On the special stage, robots and skilled craftsmen work together to perform scraping. A scraping system using FANUC's six-axis CRX Series collaborative robot handles rough scraping, while craftsmen complete the precision finishing. Tools, techniques, and scraping patterns vary, and craftsmen from different manufacturers take the stage each day, giving visitors a chance to appreciate their unique approaches.

Hands-on workshops are also held for up to 10 participants per session, allowing visitors to learn directly from skilled craftsmen. Participants brace a chisel-like scraper with a carbide tip against their hip bone and push forward to scrape the surface. The semi-crouched posture requires core strength, and participants found their legs shaking and gave up after about five minutes. In contrast, skilled craftsmen can work continuously for hours. Even a square plate measuring about 30 centimeters on each side, like those used in the workshop, takes more than a day to finish.

This offers a unique opportunity to experience the skills of both craftsmen and robots firsthand.
